

TIMOTHY POORMAN

Mechanical Engineer (B.S. May 2026)

Mechanical engineer looking for full-time position that allows me to utilize my hands-on experience with engineering testing, design, and manufacturing. Skilled in root-cause-analysis, instrumentation, and collaborative problem-solving with the end goal of achieving effective, data-driven solutions.

Key Skills and Characteristics

- SolidWorks
- LabVIEW, Basic C++, Basic Python
- Microsoft Excel, Word, PowerPoint
- Mechanical Design, Testing & Instrumentation, Data Analysis, Fabrication

Work Experience

- Scot Industries-Sales Engineer
(June 2026-Present)
 - Collaborated with plant supervisor on manufacturing process improvement to streamline production methods
 - Performed root cause analysis on customer product issues to identify manufacturing and design-related failures.
 - Implemented inventory system to minimize material waste in the manufacturing process.
- Komatsu Mining-Engineering Intern
(August 2024-April 2026)
 - SR motor testing and optimization using NI DAQs, RPT and RTD sensors. Collection and interpretation of data to evaluate and optimize performance and reliability. Facility runs several hundred motor tests each year.
 - Support other engineering projects with SolidWorks, Excel, Thermodynamics and Heat Transfer
- American Pool Service-Pool Technician
(May 2023-August 2023, May 2024-August 2024)
 - Consistently performed routine maintenance along with frequent troubleshooting on pool pumps, filters, and control systems, and maintained pool chemistry
 - Gained valuable customer service experience interacting with clients.

Engineering Projects

- Instrumentation & Data Acquisition: Worked with NI DAQs, RPT/RTD sensors, motor alignment tools; used LabVIEW, proprietary software, and Excel for data acquisition and analysis.
- Heat Transfer and Design Optimization – Weld on Sensitive Component: Supported an engineer in root cause analysis for a specific set of temperature sensitive welds overheating. Approximated heat penetration using heat transfer and thermodynamics and made change recommendations to the engineer.
- Process Optimization – Joyal Lug Fuser: Supported engineer in collecting test data then implementing that data in the optimization of current and compression settings to improve consistency and quality of fused lugs.
- Engineering Leadership – Lead an engineering class sub-team on researching, designing, and building a pressure headloss system.
- SolidWorks Design: Designed modular storage system for sensitive electronics, controller mounts and bases, frame supports.
- Fabrication: Pen plotter made with 3-D printed components; involved Arduino hardware and programming, and servo motor pulley system.

Education

- LeTourneau University-Longview, TX
B.S. Mechanical Engineering (May 2026)
Relevant Coursework: Mechanics of Materials, Thermodynamics, Heat Transfer, Fluid Mechanics, Manufacturing Processes, Machine Design

Location

LONGVIEW, TX

Phone

(903) 918-4085

Email
